Community Defibrillator Training 28th September 2017

Following a community funding raising scheme, a Defibrillator was purchased and installed in Glamorgan Way in September 2017. Training in the community was arranged to potentially save lives; create confidence in the community to understand the processes, as well as managing best practice.

'Following a survey by the British Heart Foundation showed just 22 per cent people in the UK would know how to use a defibrillator in an emergency'. Due to these findings the Practice arranged a Community Training session on 28th September 2017 to raise awareness in the Health Promotion Room.

Staff, Patients and members of the families who the Defibrillator is in memory of attended training and then we had an official poignant balloon release marking the unveiling of the Defibrillator and a memorial plaque that has been attached to the surgery.

The Practice will ask attendees from the community to complete a training questionnaire to evaluate its outcomes.

87% of attendees would be confident using a defibrillator in the event of a medical emergency.

100% of attendees would be interested in attending an update training session annually.
(Practice to arrange date)

Training Questionnaire attached for feedback

Community Defibrillator Training for Church Gresley

Questionnaire

1. Do you live in Church Gresley?

- Yes
- No- but from Local villages
- No- from outside of the area
